The Bathlift choice of healthcare professionals

SilverLine-technology

- No unpleasant odours
- No unsightly discolouration
- No chance for bacteria
- Very easy to clean

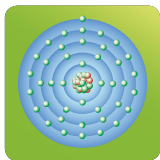

The KANJO SilverLine was developed in collaboration with the Fraunhofer Institute for Chemical Technology ICT.

The result: SilverLine Technology. Its unusual features include, in particular, the innovative surface and material structure featuring water-repellent attributes thanks to nanotechnology – akin to the lotus effect – and containing silver ions with antibacterial properties. This enormously facilitates daily hygiene, creates significantly greater quality of life and protects the right to dignity and respect in the private sphere.

Plastic with nano technology.

The admixture of additives during the manufacturing process creates a water-repellent surface. Dirt particles remain in the water and no longer adhere to the product surface. They are washed away with the water droplets. This phenomenon was first observed on the leaves of the lotus flower – and has since been known as the lotus effect.

Antibacterial material.

Using advanced additive technology, the Fraunhofer Institute was able to embed silver particles in the plastic material. The silver releases ions on contact with water, reliably killing 99.9 per cent of all common germs and pathogens. This enables the patented material to avoid infections while at the same time preventing odours and discolouration.

Made in Germany – entirely.

The KANJO SilverLine bath lift was not just developed at the Fraunhofer Institute for Chemical Technology near Karlsruhe; the entire production process from component fabrication to assembly takes place in Germany as well.

SilverLine Technology is a unique selling proposition of the very highest quality.

Why choose a powered bathlift?

Powered bathlifts are an excellent solution to assist people having difficulty getting in and out of the bath safely.

There are various bathlift designs available which will allow you to transfer onto the bathlift seat safely and lower, recline and raise you after a relaxing soak in the bath. A backrest will support the user during travel and there are additional supports such as harnesses for adults and children available.

You should consider the WARRANTY on the battery handset on a powered bathlift as this will probably be the most expensive item to replace outside of the warranty period. Check the WARRANTY of the battery handset, charger and actuator prior to purchase to ensure the majority of the lifetime costs of your bathlift purchase is assured.

Other things to consider are the weight limit and stability of your bathlift as you may need to use the bathlift in a corner bath or awkward shaped bath.

have introduced the Kanjo range of bathlifts into the U.K. market in order to supply the highest quality bathlift products and accessories to suit all users of any age with additional supports available to assist adults and children to bathe safely.

About us

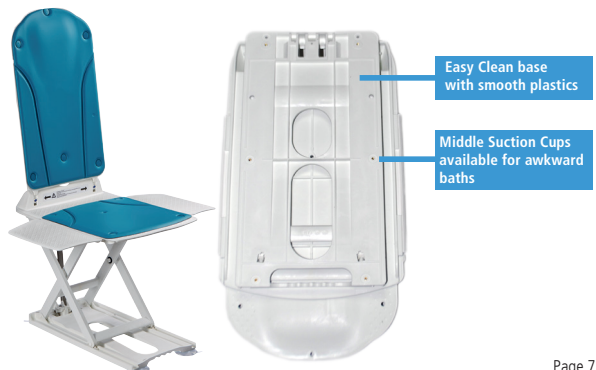

has established itself as an organisation you can rely on within the U.K. bathlift market.

The customer focused organisation has an amazing team of staff with over 30 years experience within the bathlift market.

The team has an enviable reputation for providing the highest quality, versatile, reliable bathlifts and accessories for adults and children supported by unbeatable warranties, customer service levels and support.

Unlike other large corporations, we focus solely on bathlifts and our bathlift customers and that is the reason we make a difference.

A bathlift is an extremely important aid to assist people in getting in and out of the bath safely, and our experience tells us that our customers including Occupational Therapists, Physiotherapists, Carers, Community Equipment Stores Managers, Technicians, Purchasing Professionals, 3rd Party Providers and Private Individuals need 100% focus from their bathlift provider.
